

AgentsVille Trip Planner - Project Assignment

In this project, you'll implement an AI system to help you plan a trip--to the wonderful city of AgentsVille!

Your AI system will demonstrate advanced LLM reasoning techniques including:

1. **Role-Based Prompting** - Your agent will act as a specialized travel planner
2. **Chain-of-Thought Reasoning** - Step-by-step planning of itineraries
3. **ReAct Prompting** - Thought → Action → Observation cycles
4. **Feedback Loops** - Self-evaluation using tools in the ReAct loop to find mistakes and improve plans

You'll simulate external API calls to gather weather data and activities. Then, process this information to create personalized travel itineraries based on interests and other constraints. Last, you'll implement a feedback loop to refine the plan.

Your task is to build a travel agent that can plan the perfect AgentsVille vacation!

Project Instructions

Here are the steps you'll follow:

1. **Define Vacation Details**
 - Specify the trip duration, interests, and constraints.
 - Use Pydantic to structure and verify this information in a class called `VacationInfo`.
2. **Review Weather and Activity schedules**
 - Simulate API calls to gather weather data and available activities in bulk
 - Review the data manually to understand the available options
3. **The ItineraryAgent**
 - Implement an agent that generates a day-by-day itinerary based on the vacation details
 - The system prompt will guide the agent's reasoning through a step-by-step planning process to take travel preferences (e.g. destination, dates, interests) and generate a detailed day-by-day itinerary

- Craft the components of the prompt (including the role, task/instructions, output format, examples, and context) to elicit the best possible itinerary in one LLM call

4. Evaluating the Itinerary

- Evaluate the itinerary using a set of criteria to ensure a high-quality travel plan
 - For instance, does the itinerary match the city and the dates requested?
 - Or, is the total cost calculation accurate and is it within budget?
 - Or, does the agent hallucinate any activities that are not available?
 - Or, does the agent suggest activities that are not suitable for the weather? This specific evaluation function will require the use of an LLM to compare the event description against the weather data.

5. Defining the Tools

- We will define four tools to assist the agent
 - **calculator_tool**: to accurately calculate costs
 - **get_activities_by_date_tool**: to retrieve activities for a specific date
 - **run_evals_tool**: to evaluate the itinerary against the criteria
 - **final_answer_tool**: to provide the final answer in a structured format

6. The ItineraryRevisionAgent

- We will implement a second agent that revises the itinerary based on feedback using the ReAct THOUGHT → ACTION → OBSERVATION cycle.
 - The LLM will first generate a THOUGHT / ACTION message, which contains reasoning steps and a tool call invocation.
 - The Python code will parse the tool call and execute it, returning the result as a string to the LLM in an OBSERVATION message.
 - After this cycle repeats n number of times, the LLM will invoke the final_answer_tool to signal to the Python code to end the loop and return the final answer.
- This agent will also **incorporate feedback on the initial itinerary** from the travelers to ensure the final plan has **at least 2 activities per day**. A new evaluation function using a powerful LLM will be created to check this user feedback.
- The agent will use the tools above to refine the plan iteratively, checking the weather and available activities, and ensuring the itinerary meets all constraints.

7. Something just for fun!

- To wrap things up we'll create a fun, narrative summary of the trip, highlighting the best activities and experiences!

Initial Setup

Let's start with setting up our environment and defining the vacation details.

```
In [1]: # When using VSCode in the Udacity workspace, add /workspace to the PYTHON_PATH
import os
import sys

WORKSPACE_DIRECTORY = "/workspace"
if os.path.exists(WORKSPACE_DIRECTORY) and WORKSPACE_DIRECTORY not in sys.path:
    sys.path.append(WORKSPACE_DIRECTORY)
    print(f"Added {WORKSPACE_DIRECTORY} to the Python path")
```

```
In [2]: # Install required packages if not already installed
# No changes needed here.
# %pip install -q json-repair==0.47.1 numexpr==2.11.0 openai==1.74.0 pandas==2.3.0 pydantic==2.11.7 python-dotenv==
```

```
In [3]: # If using the Vocareum API endpoint

from openai import OpenAI

client = OpenAI(
    base_url="https://openai.vocareum.com/v1",
    api_key="voc-2071555106160736475395069736a40c4b848.68356976",
)
```

```
In [4]: # Throughout this project you can experiment with different OpenAI models.
# By default we will use GPT-4.1-mini, which is a good balance of speed and cost.
from enum import Enum

class OpenAIModel(Enum):
    GPT_41 = "gpt-4.1" # Strong default choice for development tasks, particularly those requiring speed, responsi
    GPT_41_MINI = "gpt-4.1-mini" # Fast and affordable, good for brainstorming, drafting, and tasks that don't req
    GPT_41_NANO = "gpt-4.1-nano" # The fastest and cheapest model, suitable for lightweight tasks, high-frequency

MODEL = OpenAIModel.GPT_41_MINI # Default model for this project
MODEL
```

Out [4]: <OpenAIModel.GPT_41_MINI: 'gpt-4.1-mini'>

Define Vacation Details

Let's encode the details of our vacation in JSON format and verify it using Pydantic.

In practice, a chatbot agent could gather the information of a user. After it has gathered all the information it needs, it could generate this JSON object from the chat transcript. We will skip that step to focus on the itinerary generation itself.

```
In [5]: # The Vacation Info Data Structure
# No changes needed here, but you may choose to personalize the data.

VACATION_INFO_DICT = {
    "travelers": [
        {
            "name": "Gour",
            "age": 32,
            # Possible interests: art, cooking, comedy, dancing, fitness, gardening, hiking, movies,
            # music, photography, reading, sports, technology, theatre, tennis, writing
            "interests": ["hiking", "music", "comedy", "technology", "reading"],

assert isinstance(vacation_info.date_of_arrival, datetime.date), "date_of_arrival should be a date"
assert isinstance(vacation_info.date_of_departure, datetime.date), "date_of_departure should be a date"
assert isinstance(vacation_info.budget, int), "budget should be an integer"

# If all assertions pass, print a success message
print("✅ VacationInfo data structure is valid!")

```

```

{'budget': 290,
 'date_of_arrival': datetime.date(2025, 6, 10),
 'date_of_departure': datetime.date(2025, 6, 12),
 'destination': 'AgentsVille',
 'travelers': [{'age': 32,
                  'interests': [hiking, music, comedy, technology, reading],
                  'name': 'Gour'},
                {'age': 30,
                  'interests': [reading, music, theatre, art, sports],
                  'name': 'Babai']}]

```

✅ VacationInfo data structure is valid!

Review Weather and Activity Schedules

Now that we have the trip details, we can retrieve the weather and activity schedules for the dates of the trip.

We will call an API to get all the data at once, in order to be able to include it in the context for our itinerary planning agent.

Also, we will format the data as Pandas DataFrames for easier viewing. Take the time to read and understand the data to see if the agent notices the same things you do. For instance:

- What does the weather look like for the trip? On what days it is sunny, rainy, or cloudy?
- What activities are available on each day? Are there any special events or festivals related to the user's interests?

```
In [7]: # The `call_weather_api_mocked` mocks calling a weather API to get weather data

from project_lib import call_weather_api_mocked
import pandas as pd

pd.set_option("display.max_colwidth", None) # Show full content in DataFrame cells

weather_for_dates = [
    call_weather_api_mocked(
        date=ts.strftime("%Y-%m-%d"), city=vacation_info.destination
    )
    for ts in pd.date_range(
        start=vacation_info.date_of_arrival,
        end=vacation_info.date_of_departure,
        freq="D",
    )
]

weather_for_dates_df = pd.DataFrame(weather_for_dates)

weather_for_dates_df
```

Out [7]:

	date	city	temperature	temperature_unit	condition	description
0	2025-06-10	AgentsVille	31	celsius	clear	A bright and sunny day in AgentsVille with clear skies and warm temperatures. Perfect weather for outdoor activities!
1	2025-06-11	AgentsVille	34	celsius	partly cloudy	A warm day with periods of sunshine and mixed clouds, making it a perfect opportunity for outdoor activities.
2	2025-06-12	AgentsVille	28	celsius	thunderstorm	A thunderstorm is expected to roll in during the afternoon, bringing heavy rain and gusty winds. The atmosphere will feel charged with humidity, creating a sultry and dramatic setting as clouds build in the sky.

In [8]: *# The `call\_activities\_api\_mocked` function returns the activities for a given date and city.
TODO: Fill in the missing parts marked with ******

```

from project_lib import call_activities_api_mocked

activities_for_dates = [
    activity
    for ts in pd.date_range(
        start=vacation_info.date_of_arrival,
        end=vacation_info.date_of_departure,
        freq="D",
    )
    for activity in call_activities_api_mocked(
        date=ts.strftime("%Y-%m-%d"), city=vacation_info.destination
    )
]

activities_for_dates_df = pd.DataFrame(activities_for_dates)

activities_for_dates_df

This exciting, indoor event at the Virtual Reality Theater is perfect for anyone interested in technology and movies.	15	[technology, movies]

The ItineraryAgent

First we will review the Pydantic objects used for defining the output of our agent, the TravelPlan, ItineraryDay, Activity, and Weather classes.

Second, we will create a Chain-of-Thought prompt to guide the agent in planning the trip. This prompt will instruct the agent to consider the weather, activities, and user preferences when creating the itinerary.

Third, we will run the agent to produce the TravelPlan object, which will refine in the following steps.

```
In [9]: # Review the data structure we will use for representing a TravelPlan, which includes  
# weather, activity_recommendations, and itinerary for each day of the trip.  
# Our goal is to take a VacationInfo object and return a TravelPlan object.  
# No changes are needed here.
```

```
class Weather(BaseModel):  
    temperature: float  
    temperature_unit: str  
    condition: str
```

```
class Activity(BaseModel):  
    activity_id: str  
    name: str  
    start_time: datetime.datetime  
    end_time: datetime.datetime  
    location: str  
    description: str  
    price: int  
    related_interests: List[Interest]
```

```
class ActivityRecommendation(BaseModel):  
    activity: Activity  
    reasons_for_recommendation: List[str]
```

```
class ItineraryDay(BaseModel):  
    date: datetime.date  
    weather: Weather  
    activity_recommendations: List[ActivityRecommendation]
```

```
class TravelPlan(BaseModel):
```

```

city: str
start_date: datetime.date
end_date: datetime.date
total_cost: int
itinerary_days: List[ItineraryDay]

```

```

In [10]: # Specify the Chain-of-Thought (CoT) prompt for the Itinerary Agent.
# Remember to include the following:
# [Role]: e.g. Itinerary Planning Agent
# [Task]: Explicitly or implicitly define a step-by-step process for creating the itinerary.
# [Output Format]: Respond using two sections (ANALYSIS AND FINAL OUTPUT) in the specified format.
# [Examples, optional]: Provide examples of how the output should look like.
# [Context]: Make sure to include the weather and activities data in the context, otherwise the agent won't have ac
# and may instead hallucinate the data.

```

```

import json
from project_lib import ChatAgent
from typing import Optional

```

```
ITINERARY_AGENT_SYSTEM_PROMPT = f"""
```

```
You are one of the greatest Itinerary Planning Agent in this world, specialized in creating personalized travel pla
```

```
## Task
```

```
Plan a day-by-day itinerary for the travelers based on the vacation info, weather, and activities.
Follow these steps:
```

- 1) Read the destination, dates, budget, and traveler interests from the vacation info.
- 2) For each date in the trip, review the weather forecast and available activities.
- 3) Select activities that match the travelers' interests. Try to include something for each traveler.
- 4) Avoid scheduling outdoor-only activities on rainy days; prefer indoor or weather-safe options.
- 5) Ensure the total cost of all selected activities stays within the budget.
- 6) Calculate the total cost by summing up all activity prices.
- 7) Include at least two activity per day.
- 8) IMPORTANT: Always create the itinerary to fully meet traveler\'s stated requirement like, buget, activity counts

```
## Output Format
```

```
Respond using two sections (ANALYSIS AND FINAL OUTPUT) in the following format:
```

```
    ANALYSIS:
```

* Step-by-step reasoning about your choices for each day

FINAL OUTPUT:

* Provide the complete travel plan as a single valid JSON object wrapped in ```json markers.

Here is an example of the expected JSON structure (with placeholder values):

```
```json
{
 "city": "AgentsVille",
 "start_date": "2025-06-10",
 "end_date": "2025-06-12",
 "total_cost": 250,
 "itinerary_days": [
 {
 "date": "2025-06-10",
 "weather": {
 "temperature": 25.0,
 "temperature_unit": "C",
 "condition": "Sunny"
 },
 "activity_recommendations": [
 {
 "activity": {
 "activity_id": "act-001",
 "name": "Example Activity",
 "start_time": "2025-06-10T10:00:00",
 "end_time": "2025-06-12T12:00:00",
 "location": "Downtown",
 "description": "A fun activity",
 "price": 25,
 "related_interests": ["music"]
 },
 "reasons_for_recommendation": ["Matches traveler interest in music"]
 }
]
 }
]
}
```
```

Authoritative TravelPlan JSON schema (from TravelPlan.model_json_schema(); use this, not the example):

```
```json
{json.dumps(TravelPlan.model_json_schema(), indent=2)}
```
```

IMPORTANT:

- The FINAL OUTPUT must contain ONLY a JSON object with keys: "city", "start_date", "end_date", "total_cost", "itin
- Do NOT echo back the vacation info input. Do NOT include "travelers", "destination", "budget" etc in your JSON.
- Copy activity data EXACTLY as provided (same activity_id, name, times, prices, related_interests, etc).
- The JSON must be a single object starting with {{ and ending with }}.

Context

VacationInfo object (actual input):

```
{vacation_info.model_dump_json(indent=2)}
```

```

[ItineraryAgent - System Prompt]

You are one of the greatest Itinerary Planning Agent in this world, specialized in creating personalized travel plans based on travelers's requirement, like – interest, buget, location, weather, etc.

Task

Plan a day-by-day itinerary for the travelers based on the vacation info, weather, and activities.

Follow these steps:

- 1) Read the destination, dates, budget, and traveler interests from the vacation info.
- 2) For each date in the trip, review the weather forecast and available activities.
- 3) Select activities that match the travelers' interests. Try to include something for each traveler.
- 4) Avoid scheduling outdoor-only activities on rainy days; prefer indoor or weather-safe options.
- 5) Ensure the total cost of all selected activities stays within the budget.
- 6) Calculate the total cost by summing up all activity prices.
- 7) Include at least two activity per day.
- 8) IMPORTANT: Always create the itinerary to fully meet traveler's stated requirement like, buget, activity counts per day, weather conditions etc.

Output Format

Respond using two sections (ANALYSIS AND FINAL OUTPUT) in the following format:

ANALYSIS:

- * Step-by-step reasoning about your choices for each day

FINAL OUTPUT:

- * Provide the complete travel plan as a single valid JSON object wrapped in ``json markers.

Here is an example of the expected JSON structure (with placeholder values):

```
```json
{
 "city": "AgentsVille",
 "start_date": "2025-06-10",
 "end_date": "2025-06-12",
 "total_cost": 250,
 "itinerary_days": [
 {
 "date": "2025-06-10",
 "weather": {
 "temperature": 25.0,
 "temperature_unit": "C",
 "condition": "Sunny"
 },
 "activity_recommendations": [
 {
 "activity": {
 "activity_id": "act-001",
 "name": "Example Activity",
```

```

 "start_time": "2025-06-10T10:00:00",
 "end_time": "2025-06-12T12:00:00",
 "location": "Downtown",
 "description": "A fun activity",
 "price": 25,
 "related_interests": ["music"]
 },
 "reasons_for_recommendation": ["Matches traveler interest in music"]
}

]

}

]

}

...

Authoritative TravelPlan JSON schema (from TravelPlan.model_json_schema(); use this, not the example):

"type": "object"  
}  
```
```

**IMPORTANT:**

- The FINAL OUTPUT must contain ONLY a JSON object with keys: "city", "start\_date", "end\_date", "total\_cost", "itinerary\_days".
- Do NOT echo back the vacation info input. Do NOT include "travelers", "destination", "budget" etc in your JSON.

- Copy activity data EXACTLY as provided (same activity\_id, name, times, prices, related\_interests, etc).
- The JSON must be a single object starting with { and ending with }.

[ Raw Response ]

#### ANALYSIS:

- The trip is 3 days long (June 10-12) in AgentsVille, with a budget of 290.
- Travelers' interests combined: hiking, music, comedy, technology, reading, theatre, art, sports.
- June 10: Weather is clear and warm, suitable for outdoor activities.
  - Activities matching interests and weather:
    - FutureTech Breakfast Meet-Up (technology) – indoor, 20
    - Serve & Savor: Tennis and Taste Luncheon (cooking, tennis) – outdoor, Babai's interests include sports; cooking not interested, but this combines tennis and cooking, Babai likes sports, and Gour no tennis but may enjoy

food. Outdoor possible as weather is clear.

- Artful Athletics (art, sports) – outdoor, suitable for Babai interests (art, sports).

- AgentsVille Twilight Writing Escape (writing, reading, art) – indoor, good for reading interests, both travelers have reading.

- Choose 2 outdoor if possible and 1 indoor for evening.

- Choose Activities:

- FutureTech Breakfast Meet-Up (matches technology for Gour)

- Artful Athletics (matches art and sports for Babai)

- Twilight Writing Escape (reading and writing for both)

However, budget will be affected if too many chosen; two activities per day minimum.

- June 11: Weather is partly cloudy, still suitable for outdoor.

- Activities:

- Morning Groove Dance Party (dancing, music, fitness) – indoor, good for music.

- Tech Lunch & Learn (technology, music, photography, writing) – indoor.

- Art & Music Fusion Fest (art, music) – outdoor.

- Palette & Palate (art, cooking) – indoor.

- Choose two activities matched:

- Morning Groove Dance Party (music, dancing)

- Tech Lunch & Learn (technology, music) – both indoors, safe given weather.

- Alternatively, Art & Music Fusion Fest is outdoor, can consider since weather is good, but prioritize indoor

options to ensure no weather risk.

- June 12: Weather has a thunderstorm in afternoon; outdoor activities should be avoided or chosen cautious.

- Activities:

- Nature & Green Thumb Adventure (hiking, gardening) - outdoor, not ideal due to thunderstorm.

- Soundtrack Picnic (movies, music) - outdoor, moves indoors with rain.

- Trail Tales (writing, hiking) - outdoor, not ideal.

- Tech & Film Fusion Night (technology, movies) - indoor.

- To stay safe, pick indoor:

- Soundtrack Picnic (movies, music) - outdoor but moves indoors if rain.

- Tech & Film Fusion Night (technology, movies)

- Budget estimation:

- June 10: FutureTech Breakfast (20) + Artful Athletics (15) + Twilight Writing (15) = 50; this is 3 activities but daily minimum is 2, so could do 2 for less cost.

- To stay within budget: pick two activities - FutureTech Breakfast (20) + Artful Athletics (15) = 35.

- June 11: Morning Groove Dance Party (15) + Tech Lunch & Learn (20) = 35.

- June 12: Soundtrack Picnic (15) + Tech & Film Fusion Night (15) = 30.

- Total: 35 + 35 + 30 = 100, well within 290.

- Could add some more activities to fully utilize interests and budget, but must have at least two activities daily.

- For June 10, to provide something for comedy (Gour's interest), no direct comedy event, but "Artful Athletics" plus FutureTech Breakfast covers both travelers; adding Twilight Writing Escape includes reading and art for both.

- Given budget ample, include three activities on June 10 to cover wider interests.

- For June 11, add "AgentsVille Art & Music Fusion Fest" (18), outdoor with partly cloudy conditions, acceptable.
- Update June 11 costs:  $15 + 20 + 18 = 53$ .
- June 12: Soundtrack Picnic is outdoor but moves indoors if rain, so safe.
- Total cost now:  $50$  (day 10) +  $53$  (day 11) +  $30$  (day 12) =  $133$ , still well under budget.
- This spread gives wide coverage of interests, satisfies the daily 2+ activity requirement, and considers weather carefully.

✓ Initial itinerary generated successfully. Congratulations!

Evaluating the Itinerary

We've successfully created an itinerary, but how do we know if it's any good?

Now we will create some evaluation functions (sometimes called evals) to help us determine the quality of the itinerary. We will not only want our final output to be of the highest quality possible initially, but we also want to give the chance for the LLM to reflect on its own output and make improvements at a second pass.

If the itinerary does not meet all the criteria specified here, no worries! Afterwards, we will implement a feedback loop that will allow the agent to improve its plan iteratively.

```
In [12]: # Helper functions for running the evaluation functions  
        # No change needed here.
```

```

class AgentError(Exception):
    pass

class EvaluationResults(BaseModel):
    success: bool
    failures: List[str]
    eval_functions: List[str]

def get_eval_results(vacation_info, final_output, eval_functions) -> EvaluationResults:
    """
    Evaluates the final output of the itinerary agent against a set of evaluation functions.
    Args:
        vacation_info (VacationInfo): The vacation information used to generate the itinerary.
        final_output (TravelPlan): The final output from the itinerary agent.
        eval_functions (List[callable]): A list of evaluation functions to apply.
    Returns:
        EvaluationResults: An object containing the success status, any failures, and the names of the evaluation f
    """

In [17]: *# Use an LLM to determine whether an event should be avoided due to weather conditions.*

ACTIVITY_AND_WEATHER_ARE_COMPATIBLE_SYSTEM_PROMPT = """

You are one of the greatest Weather Compatibility Evaluator in this world. Your job is to determine whether a given

Task

Given an activity description and a weather condition, determine if the activity can proceed safely and enjoyably.

When there is not enough information, assume the activity IS_COMPATIBLE with the weather.

And immediatly look out for indoor alternatives mentioned in the activity description – if a backup exists, the bac

Output format

REASONING:

* Analyze whether the activity is indoor, outdoor.

* Consider the weather condition and its impact on the activity.

FINAL ANSWER:

[IS_COMPATIBLE, IS_INCOMPATIBLE]

Examples

Example 1:**Activity:** Outdoor Tennis Tournament**Description:** A tennis tournament held at the open-air courts in Central Park.**Weather Condition:** Rainy day**REASONING:**

- * The activity is outdoor tennis at open-air courts.
- * Heavy rain would make the courts slippery and dangerous.
- * No backup or indoor option is mentioned.

FINAL ANSWER:**IS_INCOMPATIBLE****Example 2:****Activity:** Outdoor hiking**Description:** Hiking on mountains.**Weather Condition:** Rainy day**REASONING:**

- * The activity is outdoor hiking on a mountain.
- * Heavy rain would make the journey impossible and dangerous.
- * No backup or indoor option is mentioned.

FINAL ANSWER:**IS_INCOMPATIBLE****Example 3:****Activity:** Indore music concert**Description:** Music concert happens in auditorium or in club.**Weather Condition:** Heavy Rain**REASONING:**

- * The activity is indore music event.
- * Heavy rain will not effect the event.

FINAL ANSWER:**IS_COMPATIBLE****Example 4:****Activity:** Photography Walk**Description:** A guided photography walk through the historic district. In case of rain, the walk will move to the co

Weather Condition: Rainy

REASONING:

- * The activity is a photography walk, normally outdoors.
- * However, the description mentions a backup: covered gallery and indoor museum.
- * Since there is an indoor alternative, the activity can still proceed.

FINAL ANSWER:

IS_COMPATIBLE

Example 5:

Activity: Cooking Class

Description: Learn to cook traditional dishes at the downtown culinary school.

Weather Condition: Stormy

REASONING:

- * The activity is a cooking class held indoors at a culinary school.
- * Weather does not affect indoor activities.

FINAL ANSWER:

IS_COMPATIBLE

```

[ChatAgent – Assistant Response]

ANALYSIS:

* The traveler feedback specifies: "I want to have at least two activities per day."

* To determine incorporation, I need to check each day in the revised travel plan's itinerary for the number of activities scheduled.

* Let's analyze each itinerary day:

– 2025-06-10:

* There are three activity_recommendations scheduled: "FutureTech Breakfast Meet-Up", "Artful Athletics: Paint & Play Extravaganza", "AgentsVille Twilight Writing Escape".

* This is more than two.

– 2025-06-11:

* There are three activity_recommendations scheduled: "Morning Groove Dance Party", "Tech Lunch & Learn: A Frontiers", "AgentsVille Art & Music Fusion Fest".

* This is more than two.

– 2025-06-12:

* There are two activity_recommendations scheduled: "Soundtrack Picnic: Lunchtime Movies & Melodies", "Tech & Film Fusion Night".

* This is exactly two.

* All days in the revised plan have at least two activities per day, as requested. There is no day with one or no activities.

* The plan does not compromise on the quantity, nor does it miss the feedback in spirit or letter.

FINAL OUTPUT:

FULLY_INCORPORATED

REASON: The revised travel plan ensures that every day in the itinerary has at least two activities, thus directly and completely fulfilling the traveler's feedback.

Out[26]: EvaluationResults(success=True, failures=[], eval_functions=['eval_start_end_dates_match', 'eval_total_cost_is_accurate', 'eval_itinerary_events_match_actual_events', 'eval_itinerary_satisfies_interests', 'eval_total_cost_is_within_budget', 'eval_activities_and_weather_are_compatible', 'eval_traveler_feedback_is_incorporated'])

In [29]: *# Define the ReAct system prompt for the Itinerary Revision Agent.
Remember, the output format should include a THOUGHT and a single ACTION (tool call using JSON format).
Then the Python code will invoke the tool and add an OBSERVATION message to the chat history.*

```
## Task
```

```
Revise the initial itinerary based on the traveler's feedback. Follow these steps:
```

- 1) Review the current itinerary and count activities per day.
- 2) For any day with fewer than 2 activities, use get_activities_by_date_tool to get the full list of available acti
- 3) From the returned activities, select ones that match traveler interests and fit the budget.
- 4) IMPORTANT: Copy the complete activity object from the API response (with all fields: activity_id, name, start_ti
- 5) Build the revised TravelPlan with complete activity_recommendations including the activity object and reasons_fo
- 6) Use calculator_tool to compute the total_cost by summing all activity prices. Set total_cost to the exact result
- 7) You MUST call run_evals_tool with the complete TravelPlan to validate it. Do NOT skip this step. Do NOT assume t
- 8) If run_evals_tool returns failures, review each failure carefully in your THOUGHT and fix all issues before tryi
- 9) IMPORTANT: Always revise the itinerary to fully meet traveler's stated requirements like budget constraint, acti
- 10) VERIFY: Always verify the revised itinerary meets traveler's stated requirements and you have revised the itine
- 11) IMPORTANT: EVERY day must have at least 2 activities. Check EVERY day before submitting.
- 12) MANDATORY SEQUENCE: You MUST call run_evals_tool and confirm all checks pass, then IMMEDIATELY call final_answe

```

### ReAct Loop (iterative)
- Strict loop: THOUGHT -> ACTION -> OBSERVATION -> THOUGHT -> ACTION -> OBSERVATION ... do not skip steps.
- After every OBSERVATION, return to THOUGHT and decide the next ACTION.
- In your THOUGHT after receiving run_evals_tool results, you MUST explicitly list each evaluation check that passes
  - eval_start_end_dates_match: PASSED
  - eval_total_cost_is_accurate: FAILED (stated 250 but calculated 230)
  Then explain how you will fix each failure before proceeding.
- MANDATORY: The last two tool calls before finishing MUST be: (1) run_evals_tool (confirming success=true), then (
- final_answer_tool must receive a full TravelPlan JSON under key "final_output".

```

Available Tools

```
{get_tool_descriptions_string(ALL_TOOLS)}
```

IMPORTANT: Only use the four tools listed above (calculator_tool, get_activities_by_date_tool, run_evals_tool, final_answer_tool)

Output Format

Every response MUST include both THOUGHT and ACTION:

THOUGHT:

[Step-by-step reasoning about what to do next]

ACTION:

```
{{"tool_name": "[tool_name]", "arguments": {{[arguments]}}}}
```

CRITICAL Rules:

- When calling final_answer_tool, provide the complete TravelPlan as a JSON object under the "final_output" key.
- Always copy activity data EXACTLY from get_activities_by_date_tool responses – never modify or hallucinate activities.
- Each day must have complete weather object (temperature, temperature_unit, condition).
- Each activity_recommendation must have "activity" (full object) and "reasons_for_recommendation" (list of strings).
- Use calculator_tool to sum activity prices for total_cost rather than computing mentally.
- You MUST call run_evals_tool before final_answer_tool. Never skip validation. If you call final_answer_tool without run_evals_tool, you will fail.

[ItineraryRevisionAgent - System Prompt]

You are one of the greatest Itinerary Revision Agent in this world. You are responsible for refining travel plans based on traveler feedback.

Task

Revise the initial itinerary based on the traveler's feedback. Follow these steps:

- 1) Review the current itinerary and count activities per day.
- 2) For any day with fewer than 2 activities, use `get_activities_by_date_tool` to get the full list of available activities for that date.
- 3) From the returned activities, select ones that match traveler interests and fit the budget.
- 4) **IMPORTANT:** Copy the complete activity object from the API response (with all fields: `activity_id`, `name`, `start_time`, `end_time`, `location`, `description`, `price`, `related_interests`). Do NOT modify any field values.
- 5) Build the revised `TravelPlan` with complete `activity_recommendations` including the activity object and `reasons_for_recommendation`.
- 6) Use `calculator_tool` to compute the `total_cost` by summing all activity prices. Set `total_cost` to the exact result.
- 7) You **MUST** call `run_evals_tool` with the complete `TravelPlan` to validate it. Do NOT skip this step. Do NOT assume the plan is correct without running `run_evals_tool`.
- 8) If `run_evals_tool` returns failures, review each failure carefully in your **THOUGHT** and fix all issues before trying again.
- 9) **IMPORTANT:** Always revise the itinerary to fully meet traveler's stated requirements like budget constraint, activity counts per day, weather conditions etc.
- 10) **VERIFY:** Always verify the revised itinerary meets traveler's stated requirements and you have revised the

itinerary based on the traveler's need.

11) IMPORTANT: EVERY day must have at least 2 activities. Check EVERY day before submitting.

12) MANDATORY SEQUENCE: You MUST call `run_evals_tool` and confirm all checks pass, then IMMEDIATELY call `final_answer_tool` with the complete TravelPlan JSON. No other tools may be called between `run_evals_tool` and `final_answer_tool`. NEVER call `final_answer_tool` without first calling `run_evals_tool` and seeing `success=true`.

ReAct Loop (iterative)

- Strict loop: THOUGHT -> ACTION -> OBSERVATION -> THOUGHT -> ACTION -> OBSERVATION ... do not skip steps.

- After every OBSERVATION, return to THOUGHT and decide the next ACTION.

- In your THOUGHT after receiving `run_evals_tool` results, you MUST explicitly list each evaluation check that passed or failed, e.g.:

- `eval_start_end_dates_match`: PASSED

- `eval_total_cost_is_accurate`: FAILED (stated 250 but calculated 230)

Then explain how you will fix each failure before proceeding.

- MANDATORY: The last two tool calls before finishing MUST be: (1) `run_evals_tool` (confirming `success=true`), then (2) `final_answer_tool`. No exceptions.

- `final_answer_tool` must receive a full TravelPlan JSON under key "final_output".

Available Tools

* ``calculator_tool``: Evaluates a mathematical expression and returns the result as a float.

Args:

`input_expression (str)`: A string containing a valid mathematical expression to evaluate.

Returns:

float: The result of the evaluated expression.

Example:

```
>>> calculator_tool("1 + 1")
```

```
2.0
```

* ``get_activities_by_date_tool``: Fetches available activities for a given date and city from the activities API.

Args:

date (str): The date to fetch activities for, in "YYYY-MM-DD" format.

city (str): The name of the city to fetch activities for.

Returns:

List[dict]: A list of activity dictionaries available on the given date in the specified city.

* ``run_evals_tool``: Runs all evaluation tools on the provided travel plan and vacation info.

Args:

travel_plan (TravelPlan): The travel plan to evaluate.

Returns:

EvaluationResults: The results of the evaluations.

* ``final_answer_tool``: Returns the final travel plan

Args:

final_output (TravelPlan): The final travel plan to return.

Returns:

TravelPlan: The final travel plan.

IMPORTANT: Only use the four tools listed above (calculator_tool, get_activities_by_date_tool, run_evals_tool, final_answer_tool). Do NOT reference or call any tool not in this list.

Output Format

Every response MUST include both THOUGHT and ACTION:

THOUGHT:

[Step-by-step reasoning about what to do next]

ACTION:

{"tool_name": "[tool_name]", "arguments": {[arguments]}}

CRITICAL Rules:

- When calling final_answer_tool, provide the complete TravelPlan as a JSON object under the "final_output" key.
- Always copy activity data EXACTLY from get_activities_by_date_tool responses – never modify or hallucinate activity_id, name, times, descriptions, prices, etc. Get the exact value as it is.
- Each day must have complete weather object (temperature, temperature_unit, condition).
- Each activity_recommendation must have "activity" (full object) and "reasons_for_recommendation" (list of strings).
- Use calculator_tool to sum activity prices for total_cost rather than computing mentally.
- You MUST call run_evals_tool before final_answer_tool. Never skip validation. If you call final_answer_tool without first calling run_evals_tool and seeing success=true, the plan will be rejected.

Context

Traveler Feedback: I want to have at least two activities per day.

[Raw Response]

THOUGHT:

I reviewed the itinerary and counted the activities per day:

- 2025-06-10: 3 activities (meets requirement)
- 2025-06-11: 3 activities (meets requirement)
- 2025-06-12: 2 activities (meets requirement)

Each day has at least 2 activities, so the traveler's request for minimum 2 activities per day is already met.

Next, I will verify that activities fit the budget, interests, and weather conditions. The total cost = 20 + 15 + 15 + 20 + 18 + 15 + 15 = 133 matches the stated total_cost of 133, so it's correct.

I will run the evaluations tool to confirm all validations before finalizing.

print("✅ Revised itinerary generated successfully. Congratulations!")
```

[ItineraryRevisionAgent - System Prompt]

You are one of the greatest Itinerary Revision Agent in this world. You are responsible for refining travel plans based on traveler feedback.

Task

Revise the initial itinerary based on the traveler's feedback. Follow these steps:

- 1) Review the current itinerary and count activities per day.
- 2) For any day with fewer than 2 activities, use `get_activities_by_date_tool` to get the full list of available activities for that date.
- 3) From the returned activities, select ones that match traveler interests and fit the budget.
- 4) **IMPORTANT:** Copy the complete activity object from the API response (with all fields: `activity_id`, `name`, `start_time`, `end_time`, `location`, `description`, `price`, `related_interests`). Do NOT modify any field values.
- 5) Build the revised `TravelPlan` with complete `activity_recommendations` including the activity object and `reasons_for_recommendation`.
- 6) Use `calculator_tool` to compute the `total_cost` by summing all activity prices. Set `total_cost` to the exact result.
- 7) You **MUST** call `run_evals_tool` with the complete `TravelPlan` to validate it. Do NOT skip this step. Do NOT assume the plan is correct without running `run_evals_tool`.
- 8) If `run_evals_tool` returns failures, review each failure carefully in your **THOUGHT** and fix all issues before trying again.
- 9) **IMPORTANT:** Always revise the itinerary to fully meet traveler's stated requirements like budget constraint, activity counts per day, weather conditions etc.
- 10) **VERIFY:** Always verify the revised itinerary meets traveler's stated requirements and you have revised the

itinerary based on the traveler's need.

11) IMPORTANT: EVERY day must have at least 2 activities. Check EVERY day before submitting.

12) MANDATORY SEQUENCE: You MUST call `run_evals_tool` and confirm all checks pass, then IMMEDIATELY call `final_answer_tool` with the complete TravelPlan JSON. No other tools may be called between `run_evals_tool` and `final_answer_tool`. NEVER call `final_answer_tool` without first calling `run_evals_tool` and seeing `success=true`.

ReAct Loop (iterative)

- Strict loop: THOUGHT -> ACTION -> OBSERVATION -> THOUGHT -> ACTION -> OBSERVATION ... do not skip steps.

- After every OBSERVATION, return to THOUGHT and decide the next ACTION.

- In your THOUGHT after receiving `run_evals_tool` results, you MUST explicitly list each evaluation check that passed

or failed, e.g.:

- `eval_start_end_dates_match`: PASSED

- `eval_total_cost_is_accurate`: FAILED (stated 250 but calculated 230)

Then explain how you will fix each failure before proceeding.

- MANDATORY: The last two tool calls before finishing MUST be: (1) `run_evals_tool` (confirming `success=true`), then

(2) `final_answer_tool`. No exceptions.

- `final_answer_tool` must receive a full TravelPlan JSON under key "final_output".

Available Tools

* ``calculator_tool``: Evaluates a mathematical expression and returns the result as a float.

Args:

`input_expression (str)`: A string containing a valid mathematical expression to evaluate.

Returns:

float: The result of the evaluated expression.

Example:

```
>>> calculator_tool("1 + 1")
```

```
2.0
```

* ``get_activities_by_date_tool``: Fetches available activities for a given date and city from the activities API.

Args:

date (str): The date to fetch activities for, in "YYYY-MM-DD" format.

city (str): The name of the city to fetch activities for.

Returns:

List[dict]: A list of activity dictionaries available on the given date in the specified city.

* ``run_evals_tool``: Runs all evaluation tools on the provided travel plan and vacation info.

Args:

travel_plan (TravelPlan): The travel plan to evaluate.

Returns:

EvaluationResults: The results of the evaluations.

* ``final_answer_tool``: Returns the final travel plan

Args:

final_output (TravelPlan): The final travel plan to return.

Returns:

TravelPlan: The final travel plan.

IMPORTANT: Only use the four tools listed above (calculator_tool, get_activities_by_date_tool, run_evals_tool, final_answer_tool). Do NOT reference or call any tool not in this list.

Output Format

Every response MUST include both THOUGHT and ACTION:

THOUGHT:

[Step-by-step reasoning about what to do next]

ACTION:

{"tool_name": "[tool_name]", "arguments": {[arguments]}}

CRITICAL Rules:

- When calling final_answer_tool, provide the complete TravelPlan as a JSON object under the "final_output" key.
- Always copy activity data EXACTLY from get_activities_by_date_tool responses – never modify or hallucinate activity_id, name, times, descriptions, prices, etc. Get the exact value as it is.
- Each day must have complete weather object (temperature, temperature_unit, condition).
- Each activity_recommendation must have "activity" (full object) and "reasons_for_recommendation" (list of strings).
- Use calculator_tool to sum activity prices for total_cost rather than computing mentally.
- You MUST call run_evals_tool before final_answer_tool. Never skip validation. If you call final_answer_tool without first calling run_evals_tool and seeing success=true, the plan will be rejected.

Context

Traveler Feedback: I want to have at least two activities per day.

```
Vacation Info (JSON): {vacation_info.model_dump_json(indent=2)}
```

```
TravelPlan schema: {TravelPlan.model_json_schema()}
```

s"}}}}}} ||
| CRITICAL REQUIREMENT: The traveler wants at least two activities per day on ALL days. Before calling
| final_answer_tool, you MUST:
|
| 1. Count activities for EACH day in your THOUGHT section
|
| 2. Verify that EVERY SINGLE DAY has at least 2 activities
|
| 3. For ANY day with fewer than 2 activities, use get_activities_by_date_tool to add more activities (filter by
| weather + interests + lowest cost) OR reuse indoor, interest-matching activities from other dates for that same da
y ||
| (start_time date may differ; duplication allowed). Do NOT stop until each day has 2 activities.
|
| 4. Only call final_answer_tool after confirming all days have >= 2 activities
|
| Remember:
|
| - Copy activity data EXACTLY from the tool response
|
| - Use calculator_tool to compute total_cost
|
| - You MUST call run_evals_tool immediately before calling final_answer_tool (no other tools in between)
|
| - Avoid outdoor-only activities on rain/thunderstorm days; prefer indoor or weather-safe options
|
| - Keep observations concise and tied to traveler requirements (activities per day, weather-fit, interests, budget)
|
| - Aim to resolve multiple issues per iteration to finish quickly (within the available steps)
|
| - If a day still lacks 2 weather-safe options, immediately reuse the cheapest indoor activities from other dates t
o ||
| fill the gap; do not stop early.
|
|=====
|
|===== [ ItineraryRevisionAgent - Assistant Response ] =====
|
|=====
| THOUGHT:

```

I will count the activities for each day to check if they meet the traveler's requirement of at least 2 activities per day.

- 2025-06-10 has 3 activities, which is sufficient.
- 2025-06-11 has 3 activities, which is sufficient.
- 2025-06-12 has 2 activities, which meets the minimum requirement.

All days have at least 2 activities, so no need to add more activities.

Next, I will calculate the total cost accurately by summing the prices of all activities to confirm the plan's total cost.

Prices:

June 10: $20 + 15 + 15 = 50$

June 11: $15 + 20 + 18 = 53$

June 12: $15 + 15 = 30$

Total = $50 + 53 + 30 = 133$

The given total_cost is 133 which matches the sum.

I will now run run_evals_tool to validate the plan.

[ChatAgent - Assistant Response]

ANALYSIS:

- * The traveler feedback requests at least two activities per day.
- * The travel plan spans three days: June 10, June 11, and June 12, 2025.
- * For June 10, there are three activities listed: "FutureTech Breakfast Meet-Up," "Artful Athletics: Paint & Play Extravaganza," and "AgentsVille Twilight Writing Escape."
- * For June 11, there are three activities listed: "Morning Groove Dance Party," "Tech Lunch & Learn: AI Frontier s,"

and "AgentsVille Art & Music Fusion Fest."

* For June 12, there are two activities listed: "Soundtrack Picnic: Lunchtime Movies & Melodies" and "Tech & Film Fusion Night."

* Each day includes two or more activities, which fully satisfies the traveler feedback of "at least two activities per day."

FINAL OUTPUT:

FULLY_INCORPORATED

REASON: Each day of the revised travel plan contains two or more activities, which fully satisfies the traveler's request for at least two activities per day.

[ItineraryRevisionAgent - User Prompt]

OBSERVATION: Tool run_evals_tool called successfully with response: {'success': True, 'failures': []}

[ItineraryRevisionAgent - Assistant Response]

THOUGHT:

All evaluation checks passed successfully. The itinerary meets the traveler's requirement of having at least two activities per day, adheres to the weather constraints, and fits within the stated total budget. Therefore, the plan is ready to be finalized.

[ChatAgent - Assistant Response]

ANALYSIS:

- * The traveler's feedback explicitly requests "at least two activities per day."
- * We need to verify that for each day in the revised travel plan, there are a minimum of two activities recommended.
- * Check the "itinerary_days" in the travel plan for the number of recommended activities per day:
 - 2025-06-10: Three activities ("FutureTech Breakfast Meet-Up," "Artful Athletics: Paint & Play Extravaganza," "AgentsVille Twilight Writing Escape")
 - 2025-06-11: Three activities ("Morning Groove Dance Party," "Tech Lunch & Learn: AI Frontiers," "AgentsVille Art & Music Fusion Fest")
 - 2025-06-12: Two activities ("Soundtrack Picnic: Lunchtime Movies & Melodies," "Tech & Film Fusion Night")
- * All days have at least two activities. Some days even exceed this minimum by offering three.
- * No days fall short of the requested two activities.

FINAL OUTPUT:**FULLY_INCORPORATED**

REASON: The revised travel plan includes at least two activities for every day, fully meeting the traveler's request. All itinerary days have two or more activities scheduled.

Evals failed: ["Activities that may be ruined by inclement weather: ['Soundtrack Picnic: Lunchtime Movies & Melodies']"]

[ItineraryRevisionAgent - User Prompt]

OBSERVATION: The final plan did NOT pass all evaluations. Failures:

- Activities that may be ruined by inclement weather: ['Soundtrack Picnic: Lunchtime Movies & Melodies']

Please fix these issues and try again. Remember: every day needs at least 2 activities, copy activity data exactly from `get_activities_by_date_tool`, and use `calculator_tool` for `total_cost`. Make sure to address ALL eval failures before calling `final_answer_tool` again. Make sure you have fully incorporated the traveler's feedback

[ItineraryRevisionAgent - Assistant Response]

THOUGHT:

The evaluation failed because the "Soundtrack Picnic: Lunchtime Movies & Melodies" activity on 2025-06-12 may be ruined by thunderstorms as it is primarily an outdoor event, even though it can be moved indoors in case of rain.

The evaluation likely wants safer indoor-only activities on thunderstorm days to fully meet the requirement.

I will check if we can replace that activity for 2025-06-12 with another indoor event that matches interests and weather constraints to be safe. The "Tech & Film Fusion Night" is fine (indoor), so it stays.

Currently, 2025-06-12 has 2 activities, so after replacing "Soundtrack Picnic" with a guaranteed indoor one, it still meets the minimum activities per day.

I will call `get_activities_by_date_tool` for 2025-06-12 and city AgentsVille to find suitable indoor activities safe for thunderstorm weather and matching interests (technology, movies, music, reading, writing), preferably low cost to keep total cost in check.

ACTION:

```
{"tool_name": "get_activities_by_date_tool", "arguments": {"date": "2025-06-12", "city": "AgentsVille"}}
```

```

```

[ItineraryRevisionAgent - Assistant Response]

THOUGHT:

The current issue is the "Soundtrack Picnic: Lunchtime Movies & Melodies" which is an outdoor event that may be affected by thunderstorms. This needs replacing with a guaranteed indoor activity for the thunderstorm day 2025-06-12.

From the fetched activities for 2025-06-12:

- "AgentsVille Nature & Green Thumb Adventure" is outdoor (not good for thunderstorm).

- "Soundtrack Picnic" is outdoor (current problematic one).
- "Trail Tales: Writing & Hiking Adventure" is outdoor again (not good for thunderstorm).
- "Tech & Film Fusion Night" is indoor and already included (good).

No new indoor activity besides "Tech & Film Fusion Night". So we need to find another indoor activity from other dates that can fit 2025-06-12 with matching interests and indoor setting.

I remember the following indoor activities from previous dates:

- "FutureTech Breakfast Meet-Up" (tech, indoor)
- "AgentsVille Twilight Writing Escape" (writing, reading, art, indoor)
- "Morning Groove Dance Party" (dancing, music, fitness, indoor)
- "Tech Lunch & Learn: AI Frontiers" (technology, music, indoor)

I will select one of these cheapest indoor activities with matching interests. The cheapest is "AgentsVille Twilight Writing Escape" or "Morning Groove Dance Party" (each \$15).

Given the second activity on 12th is "Tech & Film Fusion Night" (\$15), adding one more \$15 indoor event fits well budget-wise.

I will add "AgentsVille Twilight Writing Escape" (writing+reading+art, indoor) to 2025-06-12 replacing "Soundtrack Picnic" with this event as it is a cozy indoor event and fits user interests (reading, writing, art), and weather constraints.

To conform to instructions, I must copy the exact activity data that I have for the replacement from earlier day. I will add it to 2025-06-12 as well with start_time adjusted? Instructions say do not modify fields including start_time. Since time conflicts with the original date may exist but the instructions say duplication allowed.

I will keep original times for the borrowed activity with original date, as allowed.

Finally, recalculate total cost by removing "Soundtrack Picnic" \$15 and adding \$15 "AgentsVille Twilight Writing Escape" (same price), so total cost remains 133.

Then run evals tool again before final answer.

ACTION:

```
{"tool_name": "calculator_tool", "arguments": {"input_expression": "133 - 15 + 15"}}
```

└─┘

===== [ItineraryRevisionAgent - User Prompt] =====

└─┘

OBSERVATION: Tool calculator_tool called successfully with response: 133.0

└─┘

===== [ItineraryRevisionAgent - Assistant Response] =====

└─┘

THOUGHT:

The total cost remains 133 after swapping the outdoor risky "Soundtrack Picnic" with the indoor "AgentsVille Twilight Writing Escape" for the thunderstorm day 2025-06-12. This fits the budget and weather constraints, and meets the traveler's requirement of two activities per day.

Now I will build the revised travel plan with:

- 2025-06-12 activity recommendations replaced: remove "Soundtrack Picnic" and add "AgentsVille Twilight Writing Escape" (copied exactly from 2025-06-10)
- The other days remain unchanged.

After building the updated plan, I will run run_evals_tool to validate it.

[ChatAgent - Assistant Response]

ANALYSIS:

- * The traveler feedback is: "I want to have at least two activities per day."
- * The travel plan lists 3 days: June 10, June 11, and June 12, 2025.
- * Step-by-step check for each day:

- 2025-06-10: There are 3 activities scheduled.
- 2025-06-11: There are 3 activities scheduled.
- 2025-06-12: There are only 2 activities scheduled.

* Each day has at least two activities explicitly scheduled.

* No day falls below the requested minimum of two activities.

* Additional considerations:

- Activities are scheduled at various times of the day, ensuring distribution.

- The plan meets and exceeds the "at least two" requirement on two of three days, and exactly meets it for the third.

* There is no ambiguity or unclear fulfillment of the feedback; the requirement is clearly met for all days.

FINAL OUTPUT:

FULLY_INCORPORATED

REASON: The travel plan ensures at least two activities per day for the entire trip, meeting and sometimes exceeding the traveler's stated requirement for all days in the itinerary.

[ItineraryRevisionAgent - User Prompt]

OBSERVATION: Tool run_evals_tool called successfully with response: {'success': True, 'failures': []}

[ItineraryRevisionAgent - Assistant Response]

THOUGHT:

The revised itinerary fully meets all requirements: every day has at least 2 activities, all activities fit the weather conditions (especially the thunderstorm day now only has indoor events), and the total cost is accurate. The plan has passed all evaluations successfully.

I will now submit the final itinerary.

```

[ChatAgent – Assistant Response]

ANALYSIS:

- * The traveler feedback states: "I want to have at least two activities per day."
- * Review each day in the revised travel plan for compliance:
 - 2025-06-10: Contains three activities (FutureTech Breakfast Meet-Up, Artful Athletics: Paint & Play Extravaganza, AgentsVille Twilight Writing Escape). This easily meets the minimum of two activities.
 - 2025-06-11: Contains three activities (Morning Groove Dance Party, Tech Lunch & Learn: AI Frontiers, AgentsVille Art & Music Fusion Fest). This also meets and exceeds the minimum requirement.
 - 2025-06-12: Contains two activities (AgentsVille Twilight Writing Escape and Tech & Film Fusion Night). This exactly meets the traveler's stated minimum.
- * All days have at least two activities.
- * There is no day with less than the requested two activities.
- * The plan even goes beyond the feedback by providing more than two activities on the first two days.

FINAL OUTPUT:**FULLY_INCORPORATED**

REASON: The revised travel plan ensures that each day contains at least two activities as requested by the traveler, fully adhering to the feedback. There are no days that fall below this threshold, and in some cases, there are even more activities, demonstrating complete incorporation of the feedback.

All evals passed!

[ChatAgent - Assistant Response]

|| ANALYSIS:

```

* The traveler feedback explicitly requests "at least two activities per day."
* Examine the itinerary for each day in the revised travel plan to count the number of activities scheduled per day.
  - 2025-06-10: 3 activities are listed ("FutureTech Breakfast Meet-Up", "Artful Athletics: Paint & Play Extravaganza", "AgentsVille Twilight Writing Escape").
  - 2025-06-11: 3 activities are listed ("Morning Groove Dance Party", "Tech Lunch & Learn: AI Frontiers", "AgentsVille Art & Music Fusion Fest").
  - 2025-06-12: 2 activities are listed ("AgentsVille Twilight Writing Escape", "Tech & Film Fusion Night").
* Each day has at least two activities scheduled.
* The traveler's request is fully addressed with the current schedule.

FINAL OUTPUT:

FULLY_INCORPORATED

REASON: The revised travel plan provides at least two activity recommendations for each day of the itinerary, fully meeting the traveler's feedback.

The trip to AgentsVille features two travelers: Gour, age 32, with interests in hiking, music, comedy, technology, and reading; and Babai, age 30, who enjoys reading, music, theatre, art, and sports. Their visit spans from June 10 to June 12, 2025, with a total budget of 290, and the planned itinerary stays well within that with a total estimated cost of 133. The itinerary thoughtfully blends activities that match their varied interests and takes into account the weather and indoor/outdoor suitability to ensure comfort throughout the stay.

Day 1 – June 10: The weather is clear with warm temperatures, making it ideal for both indoor and outdoor events. The day begins with a technology-focused breakfast meet-up at the Innovation Atrium, perfect for Gour's passion for technology in a comfortable indoor setting. In the afternoon, there's an engaging outdoor event called "Artful Athletics: Paint & Play Extravaganza" at Creative Courts Park, combining art and sports — a great fit for Babai's interests and suited to the clear weather. The evening winds down with a cozy writing-themed event at The Ink Loft, welcoming both travelers' shared love of reading and offering a relaxing indoor atmosphere.

Day 2 – June 11: The partly cloudy weather allows for a mix of indoor and outdoor activities. The morning features an energetic dance party at Rhythm Hall, ideal for Gour's interests in music and fitness. Around lunchtime, there's a Tech Lunch & Learn session focusing on the frontiers of AI at The Digital Atrium, appealing strongly to Gour's technology and music interests. The afternoon offers a vibrant Art & Music Fusion Festival at the Echo Gardens Amphitheater—an engaging outdoor event crafted for Babai's love of both art and music, perfect for enjoying the pleasant weather.

Day 3 – June 12: Thunderstorms are forecasted, so the itinerary wisely emphasizes indoor activities. Returning to The Ink Loft, travelers can enjoy another evening of writing and reading pursuits in a cozy and safe environment. The day's highlight is the Tech & Film Fusion Night at the Virtual Reality Theater, where technology intersects with cinema. This immersive and interactive event aligns well with Gour's technological interests and both travelers' enthusiasm for movies, providing an exciting conclusion to the trip while staying comfortably indoors.

Overall, the itinerary offers a balanced combination of interests, suitable settings, and adaptive planning to make the most of the weather conditions and ensure an enjoyable, engaging experience in AgentsVille.

CONGRATULATIONS! 🎉🥳👏

You have successfully planned a stellar vacation to AgentsVille! Your AI travel agent has demonstrated advanced reasoning techniques, including role-based prompting, chain-of-thought reasoning, ReAct prompting, and feedback loops

Give yourself a pat on the back for completing this project and completing this course!
